PMA MRN 120-B3

English marine-crane model sheet | preliminary selection reference

Puma marine project photograph; illustrative, not identified as this exact variant.

GROSS LIFTING MOMENT*

12 t-m

MAX. HYDRAULIC OUTREACH*

9.3 m

What these figures mean

The two values above are copied from the supplier's one-page PMA Marine sheet. **Gross moment is not the load that can be lifted at maximum outreach.** The allowable load must be checked against the current, configuration-specific load chart.

For a project-specific quotation, confirm

1. Required load at each outreach, lift height and operating condition.
2. Deck/foundation arrangement, stowed envelope and vessel-side structure.
3. Hydraulic power, controls, winch and any power-unit scope.
4. Current load chart, test documents and applicable flag/class requirements.

Important: Preliminary customer information only - not an approved technical datasheet, foundation drawing or operating instruction. The supplier chart graphic is omitted pending clarification. Confirm the exact model and delivered configuration in Puma's current technical file and ERBA's written quotation.
