

Marine model references

These eight PMA Marine variants appear in one-page supplier sheets provided to ERBA Marine in September 2026. The figures below repeat the sheets' headline technical references only. They are **not safe working loads** or an approved selection for a vessel.

Manufacturer marine project image; it does not identify every model in the table.

PMA Marine sheet	Gross moment (tm)*	Max outreach (m)*
PMA 70-B2	7	7.0
PMA 80-B2	8	7.0
PMA 100-B2	10	7.4
PMA 120-B3	12	9.3
PMA 150-B2	15	7.4
PMA 180-B3	18	9.3
PMA 250-B3	25	9.3
PMA 300-B3	30	9.3

***Supplier-sheet reference only.** Gross moment is not the load at outreach. Sheet charts are intentionally omitted pending a current, model-specific load chart and configuration review.

Confirm the crane for your vessel

The supplier sheets help identify a possible PMA Marine series and folded arrangement. They do not establish the delivered crane, approved lifting duty, deck design or included installation scope.

1. Lift and reach

Send every required load with its horizontal outreach, lift height or depth, duty cycle and intended operating conditions. Request the current load chart for the exact configuration.

2. Vessel and foundation

Provide vessel drawings, available deck area, obstructions, folded envelope and existing pedestal details. Confirm the foundation loads and vessel-side structural responsibility.

3. Power and control

Confirm hydraulic pressure/flow, electrical supply, local or radio controls, winch and hook arrangement, emergency-stop interface and any power-unit requirement.

4. Documents and supply

Agree the exact model, serial-specific test and inspection documents, flag/class/client requirements, coatings, delivery, warranty and any installation or commissioning scope in the written quotation.

Important: The supplied chart artwork contains entries that need manufacturer clarification. Do not use this overview or the supplier images for engineering approval or lifting operations. ERBA Marine will obtain the current technical file for the selected crane.
